

Building Digital Ecosystems for Everyday Life.

Corporate Profile & Strategic Roadmap

Bridging Malaysia's Digital Ambitions with Everyday Commercial Reality.

The Macro Opportunity

- 19% Southeast Asia digital economy surge.
- 22.6% GDP target mandated by MyDIGITAL by 2025.

The Structural Solution

- A Johor-based technology venture.
- Architecting connective tissue for fragmented offline industries.
- Four vertically integrated, mass-market platforms.

The Economic Model

- Mass-market adoption via high-frequency daily utility.
- High-margin recurring subscription revenue baselines.
- Future-ready enterprise AI and workflow automation.

Malaysia is Undergoing a Massively Funded Digital Transformation.

19%

Southeast Asia's current digital economy surge, leading regional growth.

22.6%

Government target for digital economy contribution to Malaysia's GDP by 2025.

86.4%

Organizations actively integrating digital platforms into their operations by 2027.

\$2.2B

Recent infrastructure investment by Microsoft to fuel Malaysia's cloud and AI shift.

Capital is flowing into digital infrastructure at unprecedented rates, shifting economic activity toward hyper-connected ecosystems.

The Friction Point: Ambition Outpaces Infrastructure

The Macro Demand

- 85% of organizations recognize a universal mandate for rapid tech adoption.
- Urgent drive to digitize commerce and foundational healthcare.

The Operational Reality

Only 13% of Malaysian companies are currently fully AI-ready and technologically equipped.

Despite billions in macro investment, everyday community services—from local commerce to welfare and property—remain highly fragmented, offline-heavy, and operationally inefficient.

Architecting the Digital Infrastructure for the Everyday Economy.

MindstormX is a Johor-based technology venture developing subscription-driven and transaction-enabled digital platforms designed for mass-market adoption and long-term recurring revenue.

A Vertically Integrated Suite of Everyday Platforms

The Multi-Ecosystem Advantage: Network Effects at Scale.

1. Acquisition

High-frequency daily interactions (pasar+) acquire localized users at low cost.

2. Trust & Subscription

Seamless ecosystem login transitions users into high-trust subscription environments (dokter+).

3. Life-Cycle Capture

Ecosystem captures high-value, lower-frequency lifecycle events (reno+, khairat+).

4. Data Intelligence

Aggregated behavioral data trains platform AI, driving operational intelligence and personalized recommendations.

Interconnected ecosystems generate proprietary data synergies that single-industry startups cannot replicate.

Enterprise-Grade Engineering Powered by Applied AI.

Intelligent Automation

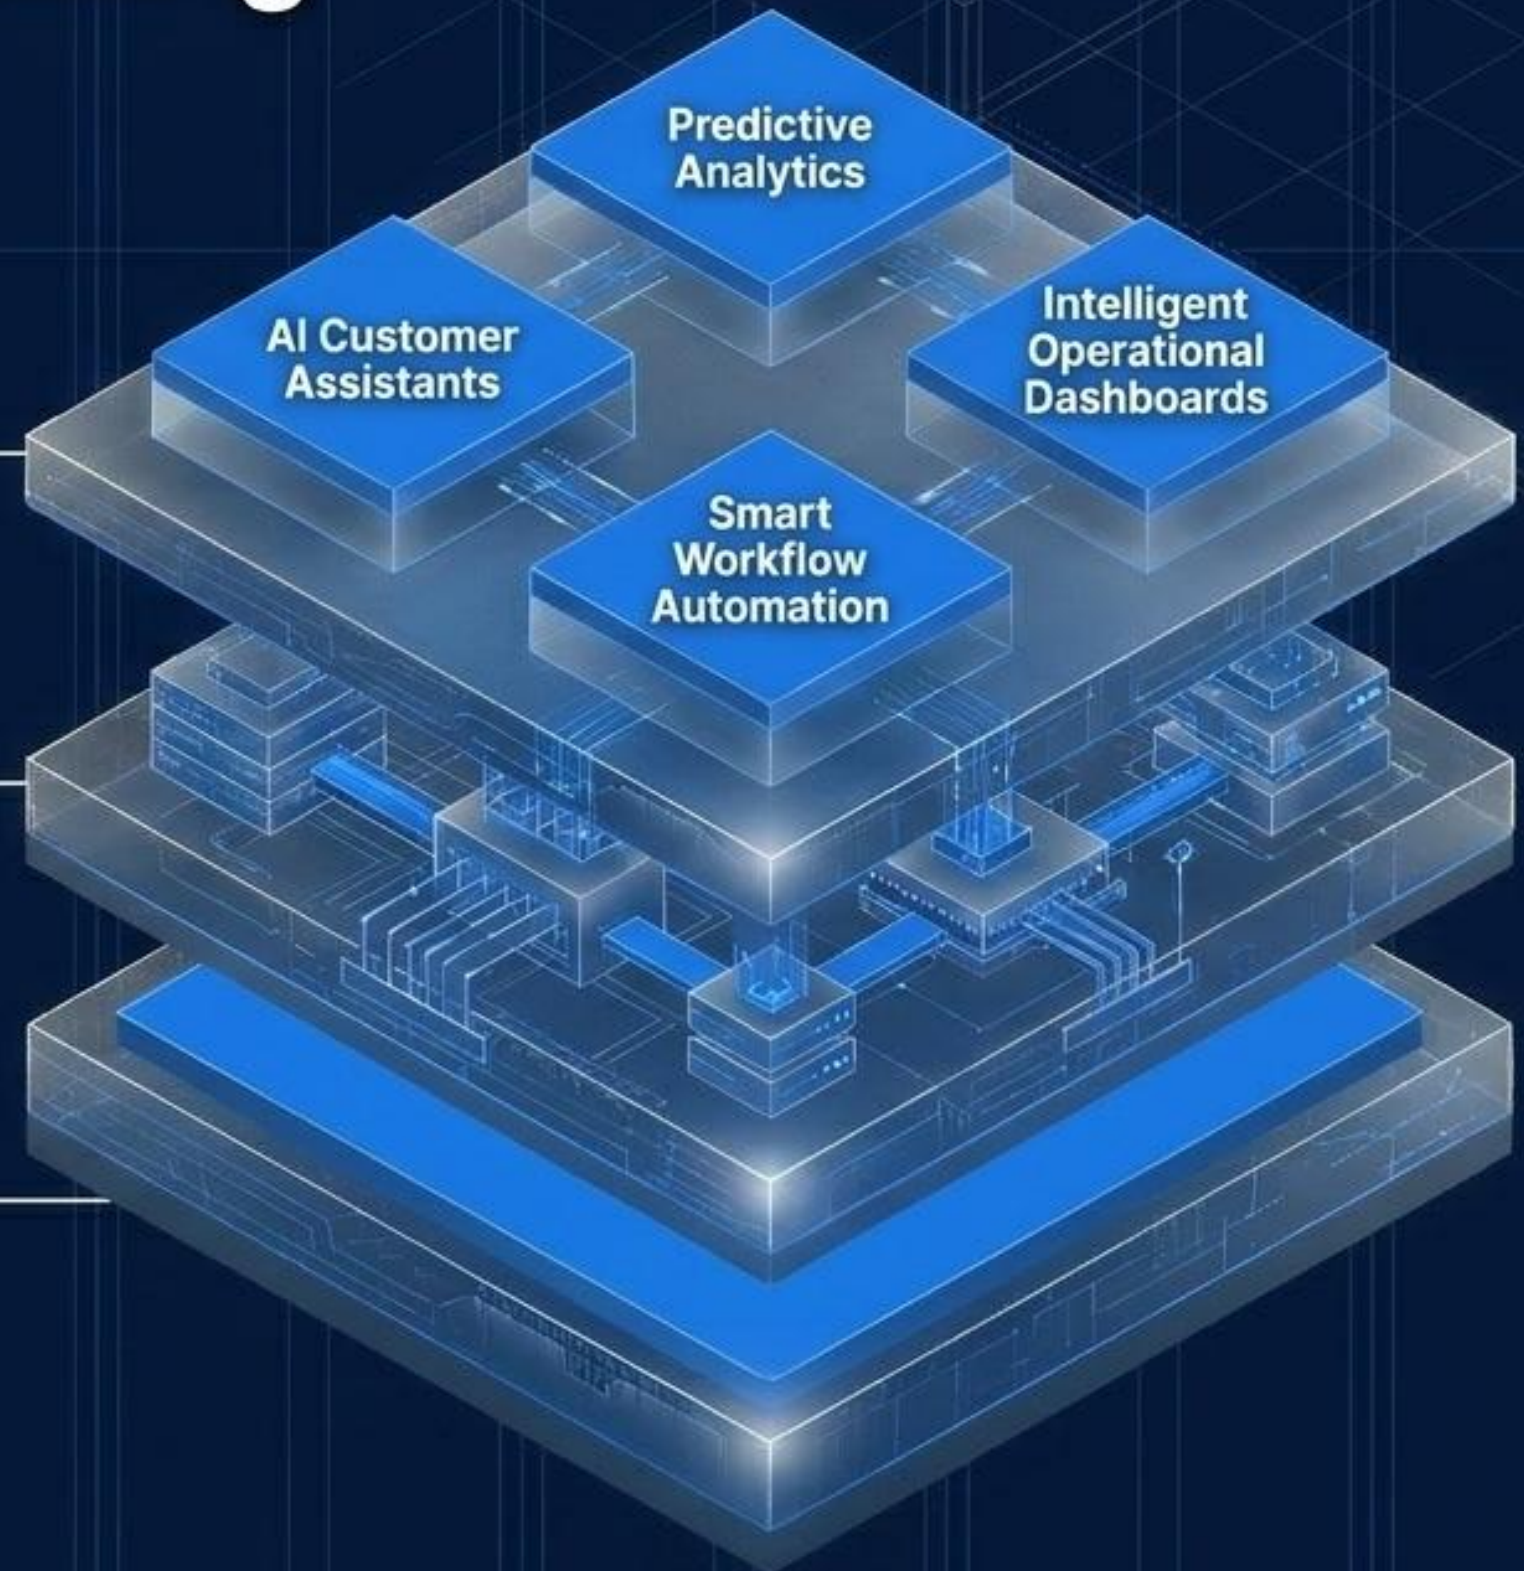

Applied AI models.

Cloud & Big Data Architecture

Highly scalable databases managing millions of high-frequency community transactions and robust API integrations.

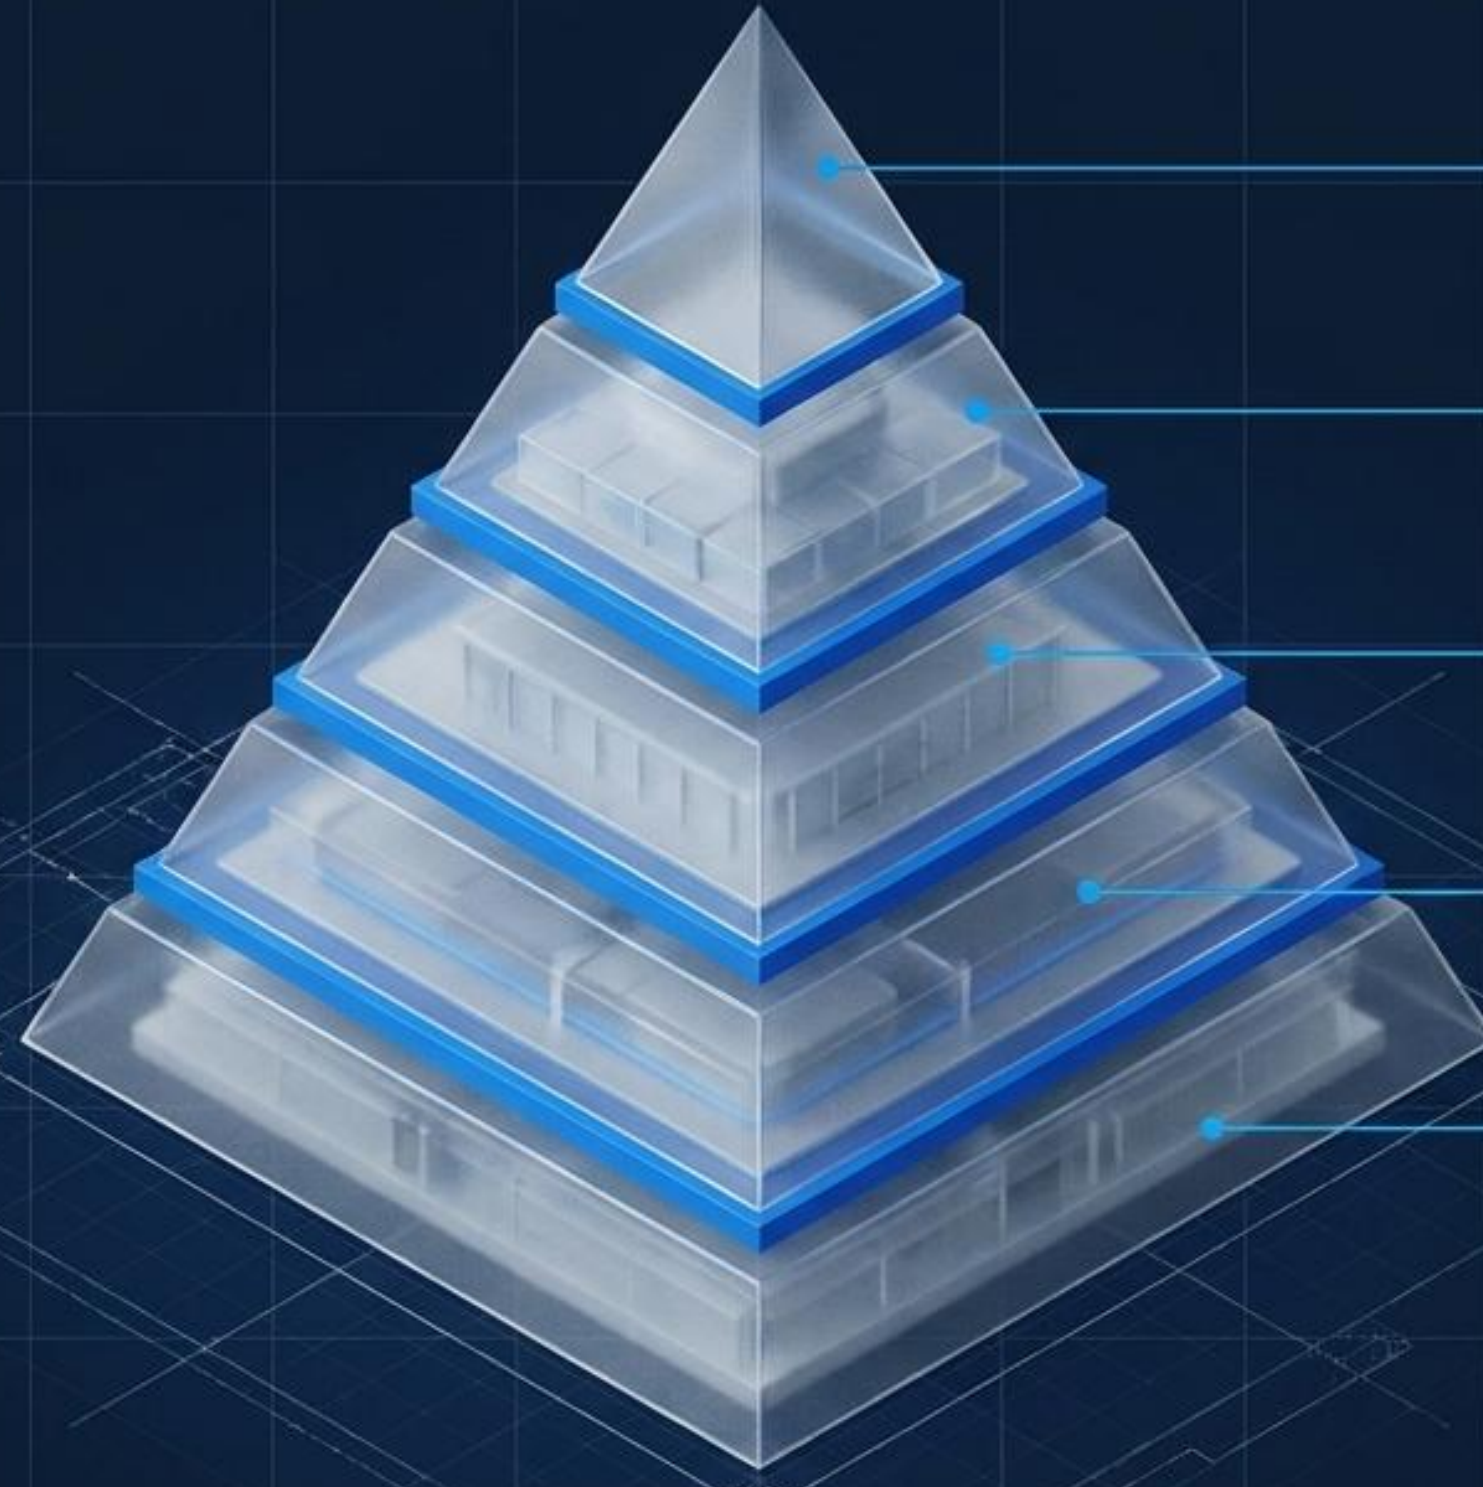

Cyber-Resilience Engine

Data security, privacy controls, and public-sector resilience. Cybersecurity positioned as an epicenter for transformation.

Stratified Monetization Architecture

Shift from Volume
to High-Margin
Scalability

Future AI Services

Premium automation, predictive modeling, and intelligent analytics

Subscription Revenue

Recurring monthly/annual high-margin memberships

Enterprise & Institutional

B2B and organizational licensing opportunities

Marketplace Monetization

Vendor onboarding, featured listings, and local advertising

Transaction Revenue

Platform commissions and processing volume fees

Strategic Alignment with National Digital Agendas.

National Macro Agenda

MindstormX Solution

Malaysia Digital Economy Blueprint (MyDIGITAL): Digitize 875,000 MSMEs and foster inclusive socioeconomic growth.

Provides turnkey digital storefronts (pasar+, reno+) to offline-heavy local businesses and contractors.

National AI Office (NAIO) Mandate: Drive applied AI into practical, everyday economic sectors.

Integrates smart workflow automation and predictive analytics into grassroots community services.

RMKe-12 (Twelfth Malaysia Plan): Eradicate the digital divide and elevate living standards.

Democratizes healthcare access (dokter+) and digital welfare (khairat+) via accessible subscription models.

Core Structural Defensibilities.

Localized Positioning

Platforms are engineered specifically around Malaysian market behaviors, bypassing friction faced by generic, imported tech solutions.

Multi-Ecosystem Lock-In

Shared infrastructure across healthcare, commerce, and property creates high switching costs for both users and vendors.

Predictable Economics

A subscription-first baseline creates sustainable, long-term cash flow and robust operational stability.

Replicable Architecture

The underlying codebase and ecosystem mechanics are fundamentally designed to scale efficiently into fragmented ASEAN markets.

Strategic Expansion Roadmap (2026–2030).

Phase 1: Johor Market Penetration

Launch and validate core ecosystems. Secure strategic institutional partnerships and drive aggressive SME and community onboarding.

Phase 2: Nationwide Expansion

Scale user acquisition across all Malaysian states. Deploy comprehensive B2G (Business-to-Government) and enterprise collaborations.

Phase 3: Regional Ecosystem Scaling

Export the architecture to the broader ASEAN market. Deepen cross-platform AI integration for international operational intelligence.

The Multidisciplinary Ecosystem Architects

Farhan

Co-Founder, Operations

Focuses on operational leadership, strategic execution, and ecosystem growth initiatives.

Hafiz

Co-Founder, Strategy

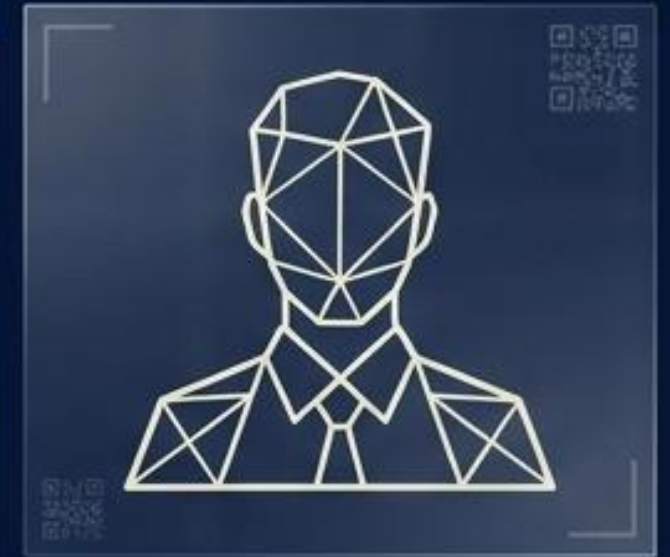

Leads digital ecosystem architecture, institutional partnerships, and brand expansion.

Nash

Co-Founder, Engineering

Oversees system architecture, infrastructure resilience, and enterprise platform development.

Fakhri

Co-Founder, Business Development

Leads field operations, stakeholder engagement, and strategic market penetration.

The Proposition: Invest in the Infrastructure of the Everyday Economy.

MindstormX represents a unique opportunity to secure foundational positioning within Malaysia's rapidly emerging digital services economy.

Untapped Vertical Markets

Capturing massive, offline-heavy community sectors currently devoid of digital coordination.

Compounding Revenue

High-recurring subscription ecosystems coupled with future-ready AI scalability.

Strategic Public-Private Synergy

Perfectly aligned with macro government spending and national digitalization blueprints.
